Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://emotion-detection-learning-support-engine-project-hyft4alehytr.streamlit.app/
Programming Language(s)	Python
Framework(s) Used	Streamlit TensorFlow / Keras
Key Features Implemented	• Text-based emotion detection using AI • Subject selection • Personalized learning recommendations • Interactive Streamlit web interface • AI-generated learning support • Real-time emotion analysis from text input
Pending / Incomplete Features	• User login and profile management • Learning history tracking • Multi-language support
Setup / Run Instructions	☐ Clones the GitHub repository automatically. ☐ Installs all required dependencies from requirements.txt. ☐ Loads the configured environment variables and secrets (e.g., GEMINI_API_KEY). ☐ Starts the Streamlit application using: streamlit run app.py

	☐ Hosts the application on Streamlit Cloud and provides a public URL for users to access it through a web browser without any local installation.

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The application is developed using Python and Streamlit with a modular architecture. It analyzes user-provided text to detect emotions using AI and provides personalized learning recommendations. The project is version-controlled using GitHub and deployed on Streamlit Community Cloud for easy access.
